References are made in the financial reports to a number of financial performance measures which are not defined according to IFRS. These key figures provide complementary information and are used to help investors as well as group management analyze the company's operations and facilitate an evaluation of the performance. Since not all companies calculate financial performance measures in the same manner, these are not always comparable with measures used by other companies. These financial performance measures should therefore not be regarded as a replacement for measures as defined according to IFRS.

Hänvisningar görs i finansiella rapporter till ett antal finansiella mått som inte definieras enligt IFRS eller årsredovisningslagen. Dessa nyckeltal ger kompletterande information och används för att hjälpa särskilt investerare som ledning att analysera företagets verksamhet. Eftersom inte alla företag beräknar finansiella mått på samma sätt, är dessa inte alltid jämförbara med mått som används av andra företag. Dessa finansiella mått ska därför inte ses som en ersättning för mått som definieras enligt IFRS eller årsredovisningslagen.

1) Calculations according to GRI Standard Guidelines, [www.globalreporting.org](http://www.globalreporting.org).

2) Direct economic value include revenues, other operating income, financial income, profit from divested companies and share of profit in associated companies.

3) Operating costs include cost of sales, marketing expenses, administration expenses, research and development expenses, other operating expenses, deducted for employee wages and benefits. COS when presented in relation to sustainability information refers to cost of sales at standard cost in MSEK.

4) Costs for providers of capital include financial costs and dividend, but exclude redemption of shares and repurchase of own shares.

5) The total energy includes both indirect and direct energy used. Atlas Copco does not report cooling or steam separately. The calculation of direct energy, i.e. energy generated by the company for its own production or operation, comprises all fuels used on the sites, including diesel, oil, biofuel, gasoline, solar, geothermal, propane and natural gas.

6) The reporting of greenhouse gas emissions is done in accordance with the GHG Protocol ([ghgprotocol.org](http://ghgprotocol.org)). Country factors used for energy come from the International Energy Agency. Indirect energy (Scope 2) is presented both as marketbased and location-based according to the GHG Protocol. A market-based approach has been applied unless otherwise stated. Factors from NTM ([transportmeasures.org](http://transportmeasures.org)) are used for transport of goods when emission data is not provided by the transport company. Scope 3 emissions include inbound and outbound transport of goods that the company is responsible for as defined by Incoterm. Out of scope emissions data for direct CO<sub>2</sub> emissions from biologically sequestered carbon (e.g. CO<sub>2</sub> from burning biomass/biofuels) was 938 tonnes in 2021.

7) CO<sub>2</sub> emissions from energy in operations and transport (tonnes) in relation to cost of sales in the base year 2018 was 5.3.

8) Results are, as a rule, collected every two years through the Group's employee survey.
